

1	コロナ禍	More and more people have much difficulty maintaining their daily lives in the COVID-19 related crisis,
		Not only enforcement of wearing a mask, hand washing and gargling but also keeping social distance is important.
		After the declaration of a state of emergency, people had gone out of the town because of self-restraint mood.
		It was mainly because the new normal to avoid 3 Cs-confined spaces,crowded places,close contact-had spread through Japan.
		Specifically(To put it concretely), to work from home and to take a remote lesson have become common.
		The self-restraint police is an excessive case.
		Some believe a vaccine will be an ace in the hole. Others are skeptical about a vaccine and would rather not receive it.
2	SDGs	Recently, I hear the word ,SDGs.
		SDGs stands for Sustainable Development Goals, which has a wide variety of themes.
		For example, no poverty, no hunger, gender equality, quality education, clean water and sanitation, climate action.
		We are in the world where we should live a life caring more about the next generation's benefits.
		Even so, it doesn't mean to think too exaggeratedly or think too seriously.
		It is important to pay attention to trivial things in your life, such as to share the housework equally and to stop using plastic shopping bags.
3	故事成語	There is a saying "Ask the old, you will know the new", Now is the time when we should learn a lot from the history.
		Looking back on my life with my eyes closed, I have been saved many times by the saying " No one knows which is better or worse in one's life".
		Her story is contradictory/inconsistent. Her story doesn't make sense to me.
4	ことわざ	It was no use explaining him many times. It was like talking to the wall
		Her nice present to him ( for his birthday) surprised me greatly. It was like the difference between heaven and hell in my case.
		I gave him expensive tools. But that may have been like casting pearls before swine(豚)
5	AI	When the artificial intelligence spreads over our society from end to end, the roles of humans will be smaller and smaller. Nevertheless, I don't think that they will disappear. This is because only humans can create emotions like delight, anger, sorrow and pleasure ,which lead to what humans are like. In addition, everything AI does is not right abusolutely.
6	日本人論	A joke says that while three rules and four laws are produced when two German are together, three banks and four companies are made when two Japanese are. In short, Japanese people like saving money and making money.
